Balkanski, M., Nazarewicz, W., and Silva, E. da.  
OPTICAL ABSORPTION DUE TO THE INTRODUCTION OF CARBON IN THE LATTICE OF SILICON.  
[1961] [5 p. 3 refs.]

Order from SLA \$1.10                            61-18280

Trans. of Academie des Sciences [Paris]. Comptes Rendus (France) 1960, v. 251, no. 13, p. 1277-1279  
(pub. by Gauthier-Villars et Cie., Paris).

DESCRIPTORS: \*Silicon, Lattices, \*Carbon, Impurities, \*Infrared spectroscopy, Absorption, Crystals.

A spectroscopic study of silicon doped with carbon showed an absorption peak located at  $12.20 \pm 0.05 \mu$ . Infra-red spectroscopy of silicon doped with carbon, therefore, affords a reliable method of qualitative detection of the presence of carbon; it can also develop into a quantitative method for determining the carbon content in silicon.
